

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application. Please cancel claims 2 and 9. Please amend claims 1, 6, and 11, as follows:

Listing of Claims:

1. (Currently amended) A system for enhancing connectivity over the Internet, comprising:

a schedule having shifts of workers in which orders are assigned to be performed;

a mobile device accessing the schedule by an application through the Internet;

[[and]]

a proxy included in the mobile device that acts for the schedule when the mobile device is temporarily disconnected to the Internet; and

a bypass mechanism to allow the proxy to update the schedule without going through a web server when the mobile device is again connected from the Internet.

2. (Cancelled)

3. (Original) The system of claim 1, wherein the proxy includes a server that services the application as if the application were connected to the schedule when the mobile device is temporarily disconnected from the schedule.

4. (Original) The system of claim 1, wherein when the mobile device is again connected to the Internet, the proxy includes a servlet that communicates with the schedule to update the schedule with information generated by the application while the mobile device is temporarily disconnected from the Internet.

5. (Original) The system of claim 1, wherein the proxy includes a database that stores information generated by the application while the mobile device is temporarily disconnected from the schedule.

6. (Currently amended) A method for enhancing connectivity, comprising:
scheduling an order to be performed by a worker into a schedule;
accessing the schedule by a mobile device via a server on the Internet; [[and]]
substituting the schedule by a proxy included in the mobile device to allow an
application on the mobile device to interact with the proxy when the mobile device is
temporarily disconnected from the schedule; and
bypassing the server to update the schedule via the Internet with information
generated by the application when the mobile device was previously temporarily disconnected
from the Internet but is now connected to the Internet.

7. (Original) The method of claim 6, wherein substituting includes serving
by a server residing on the mobile device to service the application as if the application were
interacting with the schedule when the mobile device is temporarily disconnected from the
schedule.

8. (Previously presented) The method of claim 6, wherein when the mobile
device is again connected to the schedule, the method of claim 6 further comprising updating the
schedule with information generated by the application while the mobile device is temporarily
disconnected from the schedule.

9. (Cancelled)

10. (Original) The method of claim 6, further comprising caching information
that is generated by the application when the mobile device is temporarily disconnected from the
Internet.

11. (Currently amended) A computer readable medium having instructions
stored thereon for causing a computer to perform a method for enhancing connectivity,
comprising:

scheduling an order to be performed by a worker into a schedule;
accessing the schedule by a mobile device via a server on the Internet; [[and]]

substituting the schedule by a proxy included in the mobile device to allow an application on the mobile device to interact with the proxy when the mobile device is temporarily disconnected from the schedule; and

bypassing the server to update the schedule via the Internet with information generated by the application when the mobile device was previously temporarily disconnected from the Internet but is now connected to the Internet.
